What This Trail Shows

- This investigation traced `0x378474…4c06ad` across **53 wallets** and **138 transactions**, following the flow of funds outward through the network.
- Wallet `0x70e32f…795ff8` matched **4 independent detection signals** (Hub Activity, Fan-Out, Peel Chain, Round-Number Sender) — placing it in the **High confidence** tier, the strongest overlap of indicators found in this trace so far.
- The most active wallet in this network, `0x3fc91a…2b7fad`, was involved in **35 transactions** — a level of activity that often marks either an exchange, a service, or a key point where funds converge or get redistributed.
- Wallet `0xad4c9b…954706` sent funds to **7 distinct wallets**. Splitting funds across many recipients like this is a pattern commonly associated with attempts to obscure a money trail — though it can also reflect ordinary exchange or payroll-style activity, so it is flagged as a signal, not a conclusion.
- Wallet `0x70e32f…795ff8` forwarded **5.0000 ETH** while retaining only **0.0100 ETH** (about 0.2%). This "peel chain" shape — passing on the bulk of funds while keeping a small remainder — matches a technique documented in known money-laundering cases.
- A transfer of exactly **5 ETH** was sent from `0x70e32f…795ff8` to `0x555f8c…6a6572`. Round, whole-number amounts like this are statistically uncommon in organic activity and can indicate scripted or automated movement of funds.
- Wallet `0xad4c9b…954706` shows a circular flow — funds sent from this wallet eventually return to it after 2 hops. This pattern can indicate wash trading or an attempt to simulate legitimate circulation of funds.

These patterns are heuristic indicators derived from public blockchain data, not proof of wrongdoing. Review by a qualified investigator is recommended before drawing conclusions.

Sanctions Screening

Cross-referencing against the built-in sanctions list.

No wallets in this trace matched the verified sanctions list on file.

Wallet Risk Overview

Composite risk classification based on aggregated behavioral heuristic signals.

Possible Peel Chains (Laundering Pattern)

Asymmetric transfers where small amounts are peeled off while bulk funds continue.

Wallet Address	Main Amount	Peel Amount
0x70e32f62477734addd34e0681306c219e6795ff8	5.0000 ETH	0.0100 ETH

0x16f819e7aa312cb9823fc323b87c1a74aabbc4c8	0.6963 ETH	0.0507 ETH

Round-Number Transactions

Transfers of whole-integer token amounts, indicative of manual or OTC transactions.

Transaction (From → To)	Amount
0x70e32f…795ff8 → 0x555f8c…6a6572	5 ETH

Circular Flows (Possible Wash Trading)

Closed loops where funds cycle back to the originating address through intermediate hops.

How to Verify This Report

After publishing, navigate to the **Verify Report** page in BlockTrace, upload this exact PDF dossier, and enter the corresponding investigation hash. The platform confirms byte-for-byte cryptographic authenticity against the immutable record anchored on the Ethereum Sepolia testnet.

This report was generated using automated graph-based heuristics (hub detection, fan-out detection, peel-chain detection, round-number detection, circular-flow detection) and sanctions-list screening applied to public blockchain transaction data. Findings should be reviewed by a qualified investigator before use in any formal proceeding.
