BLOCKTRACE

FORENSIC INVESTIGATION REPORT

GENERATED: 2026-10-24 18:39 UTC	**NETWORK:** Ethereum (EVM)
STARTING WALLET: `0x0000000000000000000000000000000000000001`	**TARGET:** Subject Entity

LOW RISK	1	0	0
OVERALL STATUS	WALLETS TRACED	TRANSACTIONS	FLAGGED WALLETS

What This Trail Shows

- This investigation traced `0x000000…000001` across **1 wallets** and **0 transactions**, following the flow of funds outward through the network.
- No hub, fan-out, peel-chain, round-number, or circular-flow patterns were detected in the traced data so far. Expanding to more hops may reveal additional structure.

These patterns are heuristic indicators derived from public blockchain data, not proof of wrongdoing. Review by a qualified investigator is recommended before drawing conclusions.

Sanctions Screening

Cross-referencing against verified OFAC SDN lists and designated threat actors.

No wallets in this trace matched the verified sanctions list on file.

Wallet Risk Overview

Composite risk classification based on aggregated behavioral heuristic signals.

No wallets triggered any detection signal in this dataset.

Hub Wallets (High Activity)

Addresses exhibiting high transaction frequency and counterparty concentration.

No hub wallets detected.

High Fan-Out Wallets (Possible Fund Splitting)

Addresses distributing funds rapidly to multiple distinct recipient wallets.

No high fan-out wallets detected.

Possible Peel Chains (Laundering Pattern)

Asymmetric transfers where small amounts are peeled off while bulk funds continue.

No peel chain patterns detected.

Round-Number Transactions

Transfers of whole-integer token amounts, indicative of manual or OTC transactions.

No round-number transactions detected.

Circular Flows (Possible Wash Trading)

Closed loops where funds cycle back to the originating address through intermediate hops.

No circular flows detected.

How to Verify This Report

After publishing, navigate to the **Verify Report** page in BlockTrace, upload this exact PDF dossier, and enter the corresponding investigation hash. The platform confirms byte-for-byte cryptographic authenticity against the immutable record anchored on the Ethereum Sepolia testnet.

This report was generated using automated graph-based heuristics (hub detection, fan-out detection, peel-chain detection, round-number detection, circular-flow detection) and sanctions-list screening applied to public blockchain transaction data. Findings should be reviewed by a qualified investigator before use in any formal proceeding.
