BLOCKTRACE

FORENSIC INVESTIGATION REPORT

GENERATED: 2026-10-25 06:02 UTC | **NETWORK:** Ethereum (EVM)

STARTING WALLET: `0x098B716B8Aaf21512996dC57EB0615e2383E2f96`

MEDIUM RISK	5	8	2
OVERALL STATUS	WALLETS TRACED	TRANSACTIONS	FLAGGED WALLETS

What This Trail Shows

- This investigation traced `0x098B71…3E2f96` across **5 wallets** and **8 transactions**, following the flow of funds outward through the network.
- Wallet `0x098B71…3E2f96` matched **2 independent detection signals** (Hub Activity, Fan-Out) — placing it in the **Medium confidence** tier, the strongest overlap of indicators found in this trace so far.
- The most active wallet in this network, `0x098B71…3E2f96`, was involved in **5 transactions** — a level of activity that often marks either an exchange, a service, or a key point where funds converge or get redistributed.
- Wallet `0x098B71…3E2f96` sent funds to **4 distinct wallets**. Splitting funds across many recipients like this is a pattern commonly associated with attempts to obscure a money trail — though it can also reflect ordinary exchange or payroll-style activity, so it is flagged as a signal, not a conclusion.

These patterns are heuristic indicators derived from public blockchain data, not proof of wrongdoing. Review by a qualified investigator is recommended before drawing conclusions.

Sanctions Screening

Cross-referencing against the built-in sanctions list.

No wallets in this trace matched the built-in sanctions list.

Wallet Risk Overview

Composite risk classification based on aggregated behavioral heuristic signals.

Wallet & Detected Behaviors	Risk Assessment
`0x098B716B8Aaf21512996dC57EB0615e2383E2f96` Hub Activity • Fan-Out	● **MEDIUM** (2 signals)
`0x290ca4da2c963dea5ae736469a5b8a53d64d4e6a` Hub Activity	● **LOW** (1 signal)

Hub Wallets (High Activity)

Addresses exhibiting high transaction frequency and counterparty concentration.

Wallet Address	Total Transactions
`0x098B716B8Aaf21512996dC57EB0615e2383E2f96`	5
`0x290ca4da2c963dea5ae736469a5b8a53d64d4e6a`	3

High Fan-Out Wallets (Possible Fund Splitting)

Addresses distributing funds rapidly to multiple distinct recipient wallets.

Wallet Address	Distinct Recipients
`0x098B716B8Aaf21512996dC57EB0615e2383E2f96`	4

Possible Peel Chains (Laundering Pattern)

Asymmetric transfers where small amounts are peeled off while bulk funds continue.

No peel chain patterns detected.

Round-Number Transactions

Transfers of whole-integer token amounts, indicative of manual or OTC transactions.

No round-number transactions detected.

Circular Flows (Possible Wash Trading)

Closed loops where funds cycle back to the originating address through intermediate hops.

No circular flows detected.

How to Verify This Report

After publishing, navigate to the **Verify Report** page in BlockTrace, upload this exact PDF dossier, and enter the corresponding investigation hash. The platform confirms byte-for-byte cryptographic authenticity against the immutable record anchored on the Ethereum Sepolia testnet.

This report was generated using automated graph-based heuristics (hub detection, fan-out detection, peel-chain detection, round-number detection, circular-flow detection) and sanctions-list screening applied to public blockchain transaction data. Findings should be reviewed by a qualified investigator before use in any formal proceeding.
